

StabiLink®

MIS Interlaminar Fixation System

THE ULTIMATE BACK PAIN SOLUTION

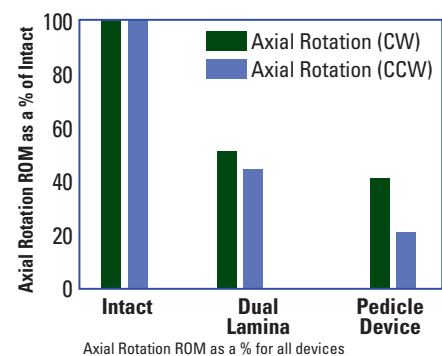

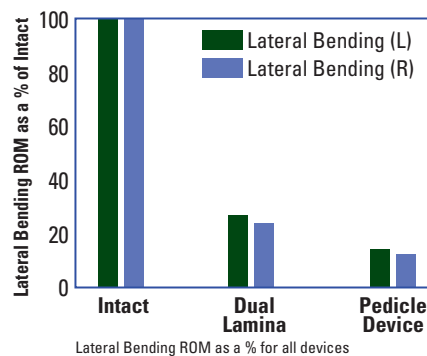

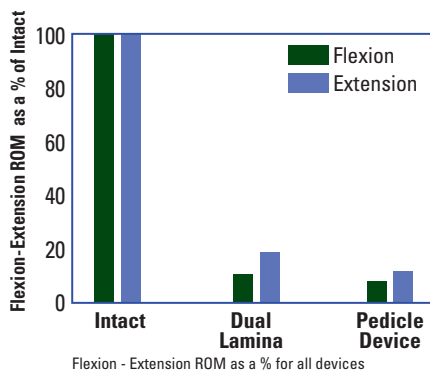

StabiLink® Dual Lamina – The Ultimate L5-S1 Solution

While 35-40% of all lumbar procedures involve L5-S1, many of the Interspinous Process Devices (IPD) are not suitable for L5-S1 and therefore miss this critical area. In addition, most other Interspinous Process Devices only act as “extension blockers” and do very little to limit axial rotation or lateral bending. StabiLink® stabilizes the motion in all three planes and is indicated for use from, T1 to S1.

Proven Biomechanical Stability

The StabiLink® Dual Lamina MIS Interlaminar Fixation System has been proven to provide significant biomechanical stability. The patented Lamina Lock design effectively limits motion in all three planes – lateral bending, axial rotation and flexion/extension, when compared to pedicle screw fixation.

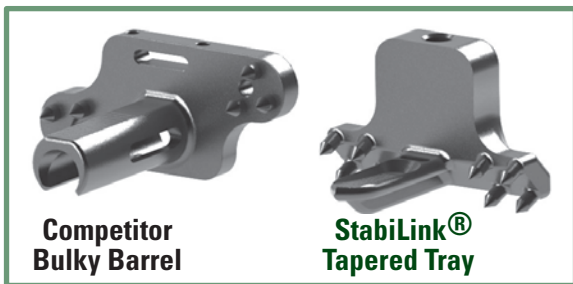

What Makes StabiLink® Dual Lamina, The Ultimate L5-S1 Solution

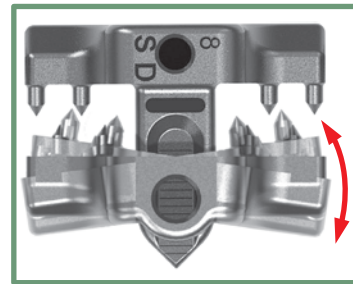

Patented “Laminar Lock” Design

- “Laminar Lock” design forms a 90° flare to engage the stronger laminar bone

- Low Profile, Tapered Tray ensures easy insertion through interspinous space

- Up to 20° of sagittal angulation better conforms to patient anatomy

Patented PG® Precision Guided Inserter/Compressor

- All-in-One Instrument
- Minimally Invasive
- Can be Separated for Easier Two-Part Insertion
- Single-handed compression
- Saves Operative Time

The StabiLink® System is an MIS interlaminar spinal fixation device.
Please refer to the Instructions for Use (IFU) for a more complete
description of indications, contraindications, warnings, cautions and
other information about the system.
