BoneInGrow Technology®

Bone integration

The new DLIF cages are developed after an extended study on the anatomical shape of the spine in the lumbar segment.

It's anatomical shape, with a "bone like surface" guarantee perfect stability and a real stand alone solution.

The bone grows inside the cage filling the entire porous structure, the cage can be easily filled with bone substitute to speed up the integration of the implant and the spine fusion.

Available with different angulations between the plates: 0°, 5° or 8°.
