## **OVERVIEW**

The Chiron Spinal Fixation System consists of a variety of pedicle screws, rods, nuts, cross links, and rod connectors. Implant components can be rigidly locked into a variety of different configurations to suit the individual pathology and anatomical conditions of the mature patient. All components are made of titanium alloy, per ASTM F136. From the thoracic spine to the ilium, the Chiron Spinal System facilitates surgeon choice and flexibility across patient types with a variety of implant options for treating multiple spinal pathologies with one system.
