SABER-C[®]

Cervical Fusion System

TRADITIONAL CERVICAL FUSION *Redefined*

Saber Technology combines the desired benefits of anterior cervical plating and standalone technologies. Saber-C facilitates a simplified cervical procedure and provides access to challenging spine levels.

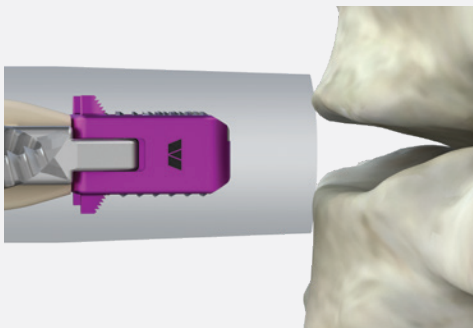

A/P VIEW

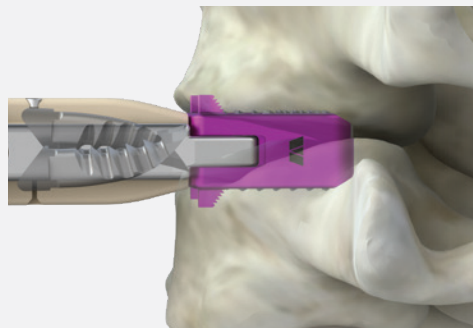

LATERAL

PRODUCT FEATURES

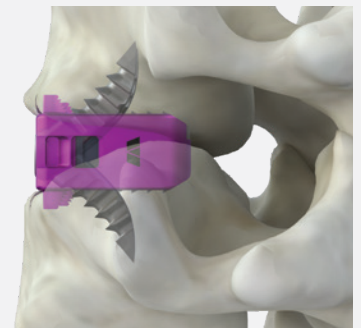

In-line Insertion through a Minimally Invasive Corridor

- Ability to access challenging levels of the spine (C2-C3 and C7-T1)
- No angles required for fixation

Simple and Versatile

- No need to remove previous hardware for adjacent level surgery
- Spike fixation is preloaded and delivered without additional external instrument passes

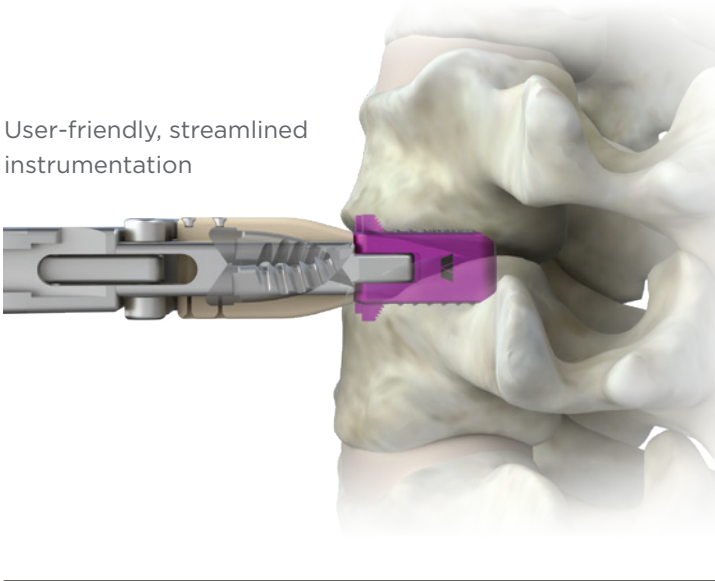

Zero-Profile Construct

- Implant sits flush with vertebral body
- Seven points of stabilization

QUICK, SLICK, & REPRODUCIBLE

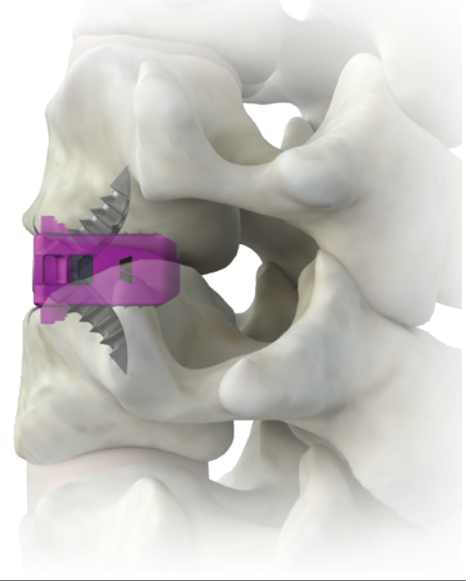

Undeployed

User-friendly, streamlined instrumentation

Deployed

Single-step fixation-
all spikes deploy
simultaneously
