Facet Stabilization Dowel

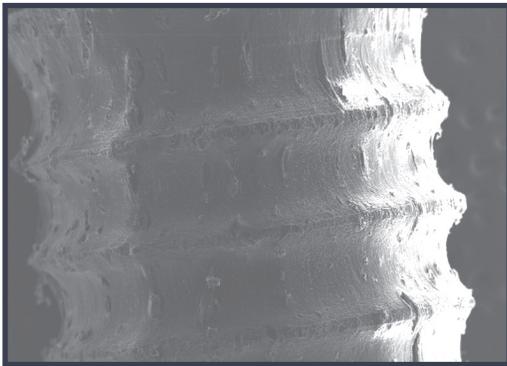

Surface Demineralized Dowel

BacFast

Facet Stabilization Dowel

BacFast HD is a facet stabilization dowel designed with a focus on osteoconductivity and preventing graft migration, making it an ideal graft to be used as a complement to common spinal fusion procedures as it preserves the posterior spine. Utilizing Xtant's proprietary demineralization technology, BacFast HD is hypo-demineralized to expose the growth factors and BMPs inherent to cortical bone. With the benefits of HD technology and increased collagen surface area, BacFast HD also provides the graft with osteoinductive properties without compromising the structural integrity of the graft.

- Precision-milled cortical bone
- Designed to stabilize the spine
- Scalloped design and tapered nose increase surface area for enhanced osteoconduction
- Contains two anti-migration locking edges

BacFast HD surface via a Scanning Electron Microscope (SEM) at a magnification of 22x.

BacFast HD on Inserter Instrumentation Surgical Kits available upon request.

Item #	Description
100511	BacFast HD Facet Dowel, 5mm
100512	BacFast HD Facet Dowel, 6mm
