

**AMBASSADOR**<sup>®</sup>

Anterior Cervical Plate  
System

# AMBASSADOR<sup>®</sup> Anterior Cervical Plate System

The **ChoiceSpine Ambassador Anterior Cervical Plate system** is a versatile system of implants and instruments with a variety of sizes to provide optimal anatomic compatibility. The integrated cam restricts the motion of the screws and is designed to allow settling in the sagittal plane. Ambassador features a thin (1.9mm) and narrow (16mm at the widest point) plate profile. The system includes 4.0mm and 4.5mm color-coded screws, variable angle screws and fixed angle screws. A variety of plate sizes are available from one level to five level to fit any anatomy.

## FEATURES

-  Hybrid Anterior Cervical Plate allows for variable and fixed constructs
-  Thin 1.9mm plate profile
-  Plate curvature allows for a fit with the natural lordosis of the spine
-  Large window for optimal visualization
-  Optimized screw purchase
-  Narrow plate profile—16mm at widest point
-  Cam designed to control settling in sagittal plane and reduce motion in all other planes

### Self Drilling & Self Tapping Screws

#### Variable angle screws

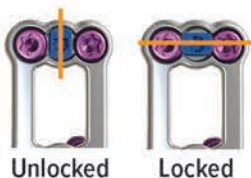

- cephalad/caudal -20° range of motion with 5° offset
- medial/lateral -15° range of motion with 5° offset

#### Fixed angle screws

- cephalad/caudal - offset of 5°
- medial/lateral- offset of 5°

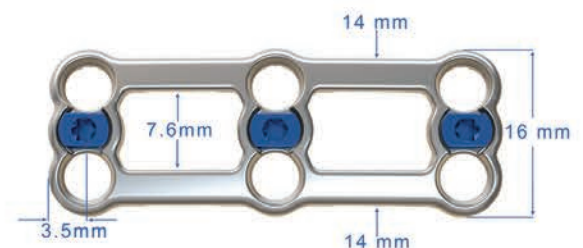

### Combine with other ChoiceSpine Products

### Visual Locking Cams
